

Fast nbn[™] broadband
is waiting for you

Get connected

The **nbn**[™] access network is replacing most existing landline phone and internet networks so that homes and businesses across Australia can enjoy access to fast broadband.**

To start experiencing the benefits — and avoid being left without affected phone and internet services when existing networks are disconnected — get connected as soon as possible.*

Contact a phone and internet provider today

Find a full list of providers in your area at nbn.com.au/providers

*Services provided over the **nbn**[™] broadband access network will be replacing phone and internet services provided over most of the existing landline networks, including copper and the majority of HFC networks within the fixed line footprint. Services provided over existing fibre networks (including in-building, health and education networks) and some special and business services may not be affected. To find out if your services will be affected, please contact your current phone or internet provider. For more information, visit www.nbn.com.au/switchoff or call 1800 687 626.

Your experience, including the speeds actually achieved over the **nbn[™] broadband access network, depends on the technology over which services are delivered to your premises and some factors outside our control (like your equipment quality, software, signal quality, broadband plan and how your service provider designs its network).

Help make the most of your nbn™ experience

Check how you use the internet between 7pm – 11pm, including how many devices are in use and how they're being used.

Select the right speed plan with the help of your phone and internet provider. Find a full list of providers in your area at nbn.com.au/providers

Connect to an nbn™ powered plan and get set up with the help of your provider — get tips on where to put your modem, and more.

Your phone and internet provider is a retailer:

- Helps you choose a plan to suit your needs
- Arranges a date for your home to be connected
- Supplies or recommends an **nbn**[™] compatible modem
- Provides instructions on how to connect
- Resolves any issues with your connection

nbn is a wholesaler:

- Builds and maintains the **nbn**[™] access network
- Supplies broadband services to providers
- Doesn't sell phone and internet services direct to the public

There is no charge for a standard connection

However, if you require additional wiring or cabling you should discuss this with your provider, as they may have costs associated.

Important:

Connecting other equipment

Some existing equipment may not be compatible with the **nbn**[™] access network at all times. If you use any of the equipment below, contact your equipment provider for advice before connecting.

Medical alarms, autodiallers and emergency call buttons

Fire alarms and lift emergency phones

Monitored security alarm systems

Fax machines and TTY equipment

Questions to ask your equipment provider:

- Will my equipment work on a plan that uses the **nbn**[™] access network?
- What alternatives are there to using a landline connection?
- Will my equipment work during a power blackout when connected to a plan that uses the **nbn**[™] access network?

Register your medical alarm, fire alarm or lift emergency phone

This helps **nbn** identify where support may be needed to help avoid a break in services when the existing network is disconnected.

Register your medical alarm:

- Call **1800 227 300**
- Visit nbn.com.au/medicalregister

Register your lift emergency phone or fire alarm:

- Call **1800 227 300**
- Visit nbn.com.au/fireandlift

Power blackouts

Equipment connected over the **nbn**[™] access network will not work during a power blackout. Consider having an alternative form of communication handy (such as a charged mobile phone).

If you have safety-critical equipment (e.g. a medical alarm, monitored fire alarm or lift emergency phone), speak to your equipment provider about alternative solutions.

Common questions

How much will connection cost?

nbn does not currently charge for a standard installation. If you require wiring or cabling changes beyond the installation of your **nbn**™ connection box, or additional wall outlets installed, you may be charged a fee. Ask your provider if this will apply to you.

Can I keep my existing home phone number if I connect to the **nbn**™ access network?

Ask your phone or internet provider if they can transfer your number when you order your **nbn**™ powered plan.

Do I need any new equipment?

In most cases, your phone or internet provider will supply or recommend a Wi-Fi gateway compatible with the **nbn**™ access network.

Can I still order a plan that uses the existing network?

In most cases, once the **nbn**™ access network is available, any new landline phone or internet services will be delivered over the **nbn**™ access network, not the existing network.

What if I don't want to connect?

Affected landline phone and internet services may stop working once the existing network is disconnected.* Ask your phone or internet provider about options such as a mobile phone and/or mobile broadband.

What if I'm on a contract?

Ask your current phone and internet provider if you can connect to an **nbn**™ powered plan.
